TrustFrame

CONCEPT IN DEVELOPMENT

REGULATORY INTELLIGENCE FOR BETTER DECISIONS

# Confidence begins with clearer data.

TrustFrame is being developed to bring banking disclosures and regulatory information together in one structured, traceable view, so fintechs and enterprises can make better-informed banking-partner decisions.

## 01 THE PROBLEM

**Fragmented research**
Disclosures, reports and updates sit in different places and formats.

**Changes over time**
Tracking what changed, and when, is hard when each source is reviewed on its own.

**Evidence and context**
Linking each finding back to its source takes extra effort.

## 02 THE APPROACH

**2.1 Collect**
Bring information from authoritative sources into one workflow.

**2.2 Organize**
Standardize it and connect banks, regulators, disclosures and updates.

**2.3 Understand**
Review history, source evidence and connections.

**2.4 Act with context**
Support informed due diligence. The judgement stays with your team.

## 03 PLANNED CAPABILITIES (NONE LIVE YET)

**Regulatory knowledge graph**
Banks, regulators, disclosures and events, connected.

**Source traceability**
Every data point links back to its original source.

**Historical tracking**
How disclosures change from one period to the next.

**Regulatory update monitoring**
Relevant circulars, linked to the entities they concern.

**Structured bank intelligence**
One consistent format, so banks compare side by side.

**Evidence-led due diligence**
Organized findings with the references behind them.

## 04 WHO IT IS FOR

**Fintech companies**
Founders, partnership leads and compliance teams researching their bank partners.

**Enterprise teams**
Treasury, procurement, and risk and compliance teams reviewing the banks they use.

## 05 OUR PRINCIPLES

**Evidence-led**
Every finding should point to the evidence behind it.

**Source-aware**
Information keeps its source, its date and its context.

**Built for clarity**
Consistent structure and plain language.

## 06 WHERE WE ARE NOW

**Idea and problem**
Problem defined.
DONE

**Research and feedback**
Collecting views from people who review banks.
WE ARE HERE

**Prototype**
First working version on public data.
NEXT

**Pilot**
Trial use with a small group of teams.
